Wuhan water level update:
It keeps rising, and rising, and rising...

Originally discussed a few breads ago here >>265238619 and here >>265345524 and here >>265347918 .

The Yangtze River downstream from the 3GD is still rising.
It seems to be rising with each hourly update so far.
See this >>265364197

Recently Wuhen had a yellow rain warning which was upgraded to Orange. See this post from a past bread for the previous yellow warning >>265345524 and this post regarding the updgraded organge rain warning >>265413510 . This is in addition to a "red warning" a few days ago.

Attached image is evidence for the number below:
As of 11:00 on June 29, the water level in Wuhan is:
>24.86m

So far the following information has been discovered:
June 24 the water level rose above 23m, so let's start with this (since all that's know is it rose above 23m):
>~23.5m
A June 27 Wuhan water report on Weibo stated:
>24.09m
Later on June 27 a Wuhan water level update on Weibo stated:
>24.12m
And a June 28 Weibo post:
>Before the flood season, the water level in Wuhan has approached the 25-meter warning water level . May God bless Wuhan and God bless Hubei.
>24.56m

Article from China.org.cn
"Wuhan on High Alert as Flood Peak Passing Through
Important to notice the date (one month later than June):
>Date: July 26, 2007
>The water was expected to rise to 25.68m by July 30
Also important point:
>The danger line is at 27.3m

Keep in mind the water level previously rose ~0.2m during a single 24hr period June 27 -- at least according to the information collected and shared here.

Thanks again to the Italian flag anon using the Chinese characters from last bread >>265352253
June 27 data was collected from Weibo, while the attached image and data starting from June 28 is from:
http://www.cjh.com.cn/swyb_sssq.html#

[See June 29 water levels in added post.]

>If someone who is in the know could indicate which of the dams are opened already, that would be great.
Here are two posts from the last bread with information on two dams that are currently discharging (flood?) water:

>>265457386
Xiangjiaba Dam
This dam is on Jinsha River.
Jinsha River is an upstream tributary of the Yangtze located within the vicinity of Yunnan province.

>>265469912
Three Gorgs Dam Status (TGD/3GD)>>265501556
>Reservoir level is rising - AND the discharge rate is increasing. It was at 34k meters cubed per second this morning. It is filling up despite the increased rate of outflow
This is very peculiar and suggests that there is a major volume of water flowing from upstream. Is this correct? If so, perhaps there *is* a dam collapse somewhere to be looking out for.

Official CCP [panic?] statement:
Monday June 29, 2020

>[...] from June 27 to 28, a new round of heavy precipitation during the Meiyu period hit Hubei again. Within 24 hours, one of the national stations in the province experienced heavy rains and 16 heavy rains occurred, mainly concentrated in Enshi, Yichang, Suizhou and other places. The maximum precipitation was 273 mm in Yuan'an; 23 of the regional stations experienced heavy rains At 473 heavy rains and 428 heavy rains, the maximum precipitation is 351 mm in Yangjiaxi, Yichang. The maximum hourly rainfall is 99 mm in Dangyang Xiangjia Caoba. In addition, thunderstorm winds of level 8 and above also appeared in Jingmen and Xiaogan, among which, the wind speed of Jingmen archway reached 29.4 meters per second.

>Hubei Provincial Meteorological Bureau submitted the "Major Weather Information Special Report" to the Provincial Party Committee and Provincial Government on June 26, and released the weather to the public through Weibo, WeChat, electronic display screens, radio, large speakers and other channels and media. information. The leaders of the Provincial Party Committee demanded that the emergency preparedness for flood prevention and drainage should be strengthened to prevent secondary geological disasters such as landslides, to ensure the safety of the flood season and the safety of people's lives and property.

>Act quickly everywhere. Enshi, Jingmen, Yichang, Xiangyang, Tianmen, Suizhou, Wuhan and other places issued red rainstorm warning signals. [...]
If this is so, then where is this information for public consumption?
>Act quickly everywhere.
This reads like a panic statement, as though they're trying to "save face," but save face from what? Are they hiding something? A dam collapse somewhere?

The remainder of the statement is screen capped in the attached image.

Are these the posts from last bread you are referring to?
If so, sharing them here for reference:

>>265491246
>Just got word from my friend in Chongching.
The river Jialing in Shapingba district is almost dried up. Something weird is happening

>>265493398
>>It flows into the Yangtze, and has at least one major dam on it, the Tingzikou. If there are other dams I can't find information on them.
>>I wonder if it either burst or was opened up to save the city.

>>265496145
>The Tingzikou dam is marked, and the Shapingba district is circled. The only dam that I'm aware of (there could be others, still working on it) is miles upriver of the district where the river appears to have dried up, to it's possible that the dam has been closed up or some other emergency measure has been taken to limit the flow.

Anonymous ID:W5DyVSSA Mon 29 Jun 2020 14:11:22 No.265508110 🇨🇦 Report
Quoted By: >>265517571 >>265528657

Hourly Wuhan water level update.

Keep in mind the time zone difference when doing analysis:
The numbers collected by this Gweilo anon are EST and are 12 hours apart from Wuhan.
For instance:
>Wuhan, Hubei, China is 12 hours ahead of Eastern Time
>5:00 p.m. Monday, in Eastern Time (EST) is
>5:00 a.m. Tuesday, Wuhan, Hubei, China (GMT+8)

Wuhan water level June 29:
00:00
>24.58m
01:00
>24.61m
02:00
>24.64m
03:00
>24.66m
04:00
>24.69m
05:00
>24.72m
06:00
>24.75m
7:00
>24.76m
[Fell asleep while keeping watch.]
10:00
>24.84m

11:00
>24.86m
12:000
>24.89m
13:00
>24.90m
14:00
>24.92m
15:00
>24.94m
16:00
>24.96m
17:00
>24.97m
Total: 0.39m water level rise so far in 24hrs.

Keep in mind the daily total rise in water level and see the previous post here >>265500360
to see numbers from June 27 where the daily average rise was ~0.2m/day. This means that at this time the water is rising at double the pace when compared with the estimates for June 27.

Now 00.3m away from the first official flood warning of 25.00m for Wuhan.
Next (more serious) flood warning is ~27.3m
And final is ~29m

Keep in mind the daily total rise in water level and see the previous post here >>265500360
to see numbers from June 27 where the daily average rise was ~0.2m/day

There should not be any issues at discharge at max flow discharge under normal circumstances. These are not normal circumstances. The issue becomes discharging at that rate with debris/excess silt that can absolutely damage the internal mechanisms or create damage inside the dams mechanisms. There is also the issue of this, you have to manage the flow rate in such a way that you limit damage both upstream and downstream. With all this rain, it seems that there is no option, you discharge as much as you can regardless of the upstream, regardless of the downstream, just to protect the dam. Discharge Flow rate doesn't matter if Inflow exceeds it, which it seems likely that it will for the foreseeable future (10 Day forecast).

>cavitation
You mean in the turbines? Flood gates are separated form the turbines. When the weather is so bad, its common to turn off the turbines to avoid damage. So chances are its just getting rid of water without any electricity being generated.

If you mean like cavitation in the flood gates, then I would say no, difference in pressure isnt that big nor it would be such a problem. Quicksand formation in the riverbed is more of a problem.

Perhaps, I didnt understand your question?

Dam translations with Google
English to Chinese (Simplified)

Thanks again to this >>265501145 Russian flag anon who posted the graphic with all the dams. What you'll find people are all the dams listed in the gaphic in that anon's post. These translations are provided here for this general's convenience. Perhaps searching for these dams with their Chinese names in either Google/Bing/Yandex/etc. or Chinese social media, might reveal some info about their status, and perhaps indicate a dam collapse somewhere. For instance, a simple Weibo search for one of these dams might reveal a helpful comment.

(c) Gezhouba Dam (GZD)
葛洲坝
(d) Three Gorges Dam (TG)
三峡大坝
(e) Xiangjiaba Dam (XJB)
向家坝水坝
(f) Xiluodu Dam (XLD)
溪洛渡水坝
(g) Baihetan Dam (BHT)
白鹤滩大坝
(h) Wudongde Dam (WDD)
乌东德水坝
(i) Guanyinyan Dam (GYY)
观音岩坝
(j) Ludila Dam (LDL)
路迪拉水坝

Longkaikou Dam (LKK)
龙开口大坝

(k) Jin'anqiao Dam (JAQ)
金安桥大坝

Ahai Dam (AH)
阿海水坝
Liyuan Dam (LY)
梨园水坝

If you find any errors or with spelling or with the translation or if a dam was missed then please let this Gweillo anon know so the appropriate spelling can be edited to enhance the search. Again: these terms were simply translated in Google from English to Chinese (Simplified) so cannot guarantee the accuracy of the translation. But at least it's something to work with.

Oh, definitely. They probably have schematics of the dam, insight into the places where the most corners were cut, and a complete set of landslide location data. But the fact that we can even approximate some of that information by cobbling together all these disparate findings is fantastic.

>>265512562
Exactly. In my heart I know that the dam will likely survive with bullshit interventions and cold-hearted human sacrifice, blowing out the boat lock system to protect the dam itself or the like and damning everyone downriver to the abyss, but I'm fascinated by the narrative of it all, the potential, the scope of what COULD be.

It's a human accomplishment that so few can learn so much so quickly, and it should be celebrated.

The TGD reservoir surface is 1k sq km = 1*10^9 (a billion) sq metres. 1 cm water level raise over 1 hour over that area translates to a volume gain of 10*10^6 (10 million) cubic metres. Additional discharge of 3k cubic metres per second is needed to offload that volume.

Two hours ago they were discharging at a rate of 32k + 35.1k m^3/s and we saw a 1 cm water level gain. That sums up to 70k m^3/s to maintain the level. Then the website stopped showing the 32000 number so last hour it was 35.1k + ?, resulting in a 5 cm decline. So possibly some 15k m^3/s on top of that have been offloaded just now.

>>265507317

My guess is that this is only for the central part. The status website was showing two numbers both cca 30k.

https://www.yangtzeriver.org/threegorges_dam/
says it's 116k.

Search for:
(g) Baihetan Dam (BHT)
白鹤滩大坝
on Weibo and found the following: this dam was recently completed in 2020. The attached image is an English translation. For some reason "crane beach" continues to appear in the translation from Weibo.

Post is from:
April 2020 and says this dam was completed then.
Location:
>the Jinsha River, tributary of the Yangtze River in Sichuan and Yunnan provinces.

>[World Anti-largest arch in the plunge pool Crane Beach power plant completed]
Recently, crane beach hydropower engineering inverted arch plunge pool complete the final warehouse floor concrete pouring. This marks the last after 22 months of intense construction, the world's largest anti-arch plunge pool successfully completed, crane beach hydropower project has basically met the conditions of the water pit.

>Water cushion pond is an important flood discharge and energy dissipation facility of the dam project. Crane Beach station Plunge Pool employ reverse buckling design floor Duplex trapezoidal cross section, 360 m in length, 1.3 meters wide, square concrete total of about 500,000 m3. After being filled with water, a 48-meter-deep water cushion will be formed to undertake the task of flood discharge and energy dissipation with high head, high flow rate, and huge discharge volume. The maximum discharge flow can reach 30,000 cubic meters per second, and the maximum discharge power can reach 60,000 MW. (Zhongxin.com)

I feel like China would gladly sacrifice the part for the whole on this one, especially if the people living in the area are fucked either way. Save what they can save and try to show that it was just bad luck, that they did all they could. I don't know how feasible that strategy is though.

But if their hand is forced then it's another matter, and they might just push everything to the absolute limit in desperation. Alternatively, if public opinion turns sharply, they might just say "fuck it" and create the worst possible outcome intentionally just to reduce the size of the population.

No one has seen Xi for a while now, right? He's just been hiding his face?

Here's a post on Weibo from:
May 8 2019
>The total installed capacity of Baihetan Hydropower Station is 16 million kilowatts. After completion, it will become the second largest hydropower station in the world and China after the Three Gorges Power Station (NetEase Editor's Note: total installed capacity of 22.5 million kilowatts). The fourth giant hydropower station with 10 million kilowatts after East Germany . . . . The Wenchuan Earthquake was triggered by the load bearing of the dam. If there is an earthquake in the future, don't ask for superstitions. . . .
Seems like an innocent post. But then:
>The Wenchuan Earthquake was triggered by the load bearing of the dam
>Wenchuan Earthquake was triggered
Weren't there a bunch of small earthquakes around the upstream reaches of the Yangtze just a few weeks ago?

Noticing that there are a bunch of dam projects the Chicoms are building in those mountains in the Sichuan and Yunnan region. Seriously, what if one of their projects suffered during one of these massive storms? Imagine the buildup of water rushing down from all the way up there? Now remember all of those videos of *how fast* the water was flowing in the Chongqing and other flood videos? Again, all of this is speculation. Just sharing some thoughts.

German design but used Chink steel and alloys. They might have worked but Chinks didnt calculate the huge amount of silt that built up. Every minute now that silt is wearing down the turbine housings.

Usually they blow up when they get hot. Even the best made US turbines have shelled out before.

If one turbine goes down, they all go down and once the flow stops entering the generation station, it overflows. China will bomb its own lockes in an attempt to create a bypass.

Hourly Wuhan water level update.
June 29 at 18:00
>24.98m
Total: 0.40m water level rise so far in 24hrs.

Don't want to create a massively large post (again) and blow-up other anons' screens so keeping this update simple.
See this post >>265508110 and this post >>265500360 for other relevant data.
In the next bread will provide a lengthy post with all the data collected up to that point.

Keep in mind the daily total rise in water level and see the previous post to see numbers from June 27 where the daily average rise was ~0.2m/day. This means that at this time the water is rising at double the pace when compared with the estimates for June 27.

Now 00.2m away from the first official flood warning of 25.00m for Wuhan.
Next (more serious) flood warning is ~27.3m
And final is ~29m

If this seems water level rise seems "slow," remember this is one of the largest rivers in the world being measured *hourly* and it's still double than the previous rise a day or so ago, in addition to the realization that there are six hours remaining for this 24hr period.

Weibo June 2020 dam incident along Jinsha River
Was looking up this dam:
(k) Jin'anqiao Dam (JAQ)
金安桥大坝
from this post >>265511365
on Weibo and found the following:
>Seven workers in Yulong County, Yunnan, were flushed into the Jinsha River due to mudslides. From the Ashan Dam on the Jinshan River to the Jin'an Bridge , people were searching for and rescued. Local villagers said that the flood-raising ravines had flooded several times in the past and caused mudslides. The picture shows that on June 16, Lijiang, Yunnan, the shed where the workers who were washed away that night had disappeared.
See the attached image for more details.

Notice the dates on the posts and the location. Is this in the vicinity of the recent earthquakes?

Their system of maintenance is to use the waterpressure to flood the sediments out ever so often, but the estimates ranged always from 30% to 60% as to how much sediment would linger after these purges. So, given they never intended to dredge the reservoir (as would any other country go about it), this dam has always been a timebomb (even if you ignored the bugmen engineering).

Thats why the US is pulling out the dams on the Colombia river. Its just too dangerous to allow trillions of tons of silt to build up.
The Aswan Dam has dirty water but the Yangtze is the dirtiest shitwater humans have tried yet. It was a big unknown. Now its clear though. It was too silty and Chinks built too large of a reservoir. Solids fell out of solution and silted 1/3 of it. It cant be dredged out or cleaned either.

>earthquakes

i was thinking.
look up secret nuclear wall of china
it runs from area hit by quakes, and long into china, with area near possible locations it might get damaged by yangtzhee dam failure.

and then look up recent spike of isotopes, anons were saying might be cherynoblye related.
Could it be, in some way possible, that earthquakes(7 in total i think) could be nuclear reactions due to failures by leaking water/cave ins?
And the reason for it appear so far away is just where the radiation managed to escape to surface and be detected.

The radiation isotope detection came the day after the earthquakes.

China higher ups is out of action, iremember an article that the army actually was moved in some massive floods but not on this one?:That seems to have a decent possibility, if the dam breaks how much imapct it can cause in the underground nuclear faciltiie? the dam its fucking big and near two failures it might even trigger earthquakes... The worst situation before might not be the one right now... we might actually not now the worst situation that can happen now,we should dig more on this? Could the raise on the radiation that was detected in europe be related to this and not russia somehow?

>>265522757
I think the earthquakes were landslides caused by water levels rising. I was watching an old documentary about the dam and a lot of chinks in the near area were experiencing cracks in their homes, due to landslides and earthquakes caused by the soil up on the steep hills being soaked in water.

If the TGD dam collapse, and cause bibical disaster...would China hunt down foreigners living a 100 km radius from that dam, and arrest them for "terrorism" and use them as scapegoats? Worse if your a burger, aussie or pajeet living in cities near the dam.

Just like arresting the two michaels for "spying", and just like blame Covid on Italy, niggers, and US military.

Hourly Wuhan water level update!
See previous update here: >>265517571

June 29 at 19:00
>24.98m
Total: 0.40m water level rise so far in 24hrs.

Here is the list so far for June 29:
00:00
>24.58m
01:00
>24.61m
02:00
>24.64m
03:00
>24.66m
04:00
>24.69m
05:00
>24.72m
06:00
>24.75m
7:00
>24.76m
[Fell asleep while keeping watch.]
10:00
>24.84m
11:00
>24.86m
12:000

>24.89m
13:00
>24.90m
14:00
>24.92m
15:00
>24.94m
16:00
>24.96m
17:00
>24.97m
18:00
>24.98
19:00
>25.00 !!!
Total: 0.41m water level rise so far in 24hrs. (if math is correct, that is)

***

That means that as of this moment the first flood warning has been reached at 25.00
Now the question is, will the river continue to rise to the 27.3m warning, which is the second flood warning. Whereas the 29m warning is the third and and final flood warning.

***

>>>24.98m incorrect
Correct is:
>>25.00m

In the next bread everything will be tallied properly.
Check screenshot and you'll see 25.00m. That is taken as evidence from the website.
Spent too much time searching for the previous earthquake posts in these breads. Something strange is going on here, and it looks like it might have something to do with the mountain region in Sichuan or Yunnan, near the upstream portion of the Yangtze.

What do you think would happen if the equivalent of the United States (in population and wastage, including pretty much every industrial complex, BSLs and military basis) is swept into the oceans within a week or two?
More importantly even, what do you would happen if half a billion people try to escape the waterpark?
India, Russia, Europe and other Asian countries couldn't cope with the influx of people, especially considering the locausts plagues destroying the means to feed the local populace.
Furthermore, Africa might spiral back into chaos due to the lack of chinese funding, and - ignoring the supplychains - pretty much every other economy would fail for the same reason, you couldn't possibly hope to print money to keep it afloat at that point.

The collapse of the globalized bronze age civilizations around the Middle East and the Mediterranean would look like childsplay.
